

Newtesol at DCNS's Supplier's Day

METCOEX Group and Nuevas Tecnologías de Soldadura (Newtesol) attended on September 9th to DCNS's Supplier's Day at the Paris Congress Hall. The objective of the event was that DCNS presented its new business lines for the near future. During the morning, the event consisted in a presentation of the company by its President and General Director, Patrick Boissier, and its Purchase and Supply Chain Director, Patrick de Lefte. After that, a round table about DCNS's growth and strategy took place, focusing on its impact on the relationship with its suppliers. In the afternoon session, DCNS presented its purchasing and suppliers' relationship policy. At the end of the session, informal networking was promoted both with DCNS's staff and the rest of the attendees.

DCNS's target markets for the near future are the naval defense market, the civil nuclear industry and the renewable marine energy. Newtesol has great experience in the first two markets. Regarding the naval defense market, Newtesol has participated in several projects worldwide. As to the civil nuclear industry, the nuclear NPT Stamp of ASME (the American Society of Mechanical Engineers) held by Newtesol certifies its aptitude for the fabrication of nuclear components.

METCOEX Group and Newtesol met with DCNS representatives that showed their interest in the Newtesol NPT Stamp, as just a few companies in Europe hold this certificate.
